

ENVIRONMENTAL POLICY

Rupert Resources Ltd. is committed to environmental protection, and the Group's management sees this as one of its top priorities. The company is committed to responsible stewardship of natural resources, and undertakes its activities in a manner that aims to reduce, manage, and rectify adverse impacts, and maximises positive environmental and social benefits. This Environmental Policy sets out our environmental strategy of good environmental management for present and future generations.

To achieve the above, Rupert Resources commits to:

- Meet or exceed the requirements of all applicable national environmental laws and regulations and, where necessary, apply best available techniques and international best practice management to environmental protection and worker and community health
- Employ efficient resource use, and responsible management of all waste streams
- Respect all environmental designations for protected areas to maintain high quality ecosystem function and assess ways to contribute to biodiversity conservation and ecosystem protection
- Manage environmental risks and work in a transparent manner with local stakeholders to create a culture of trust and cooperation
- Implement effective management systems and action plans
- conduct regular environmental reviews and assessments and act on the results, to establish a cycle of continuous improvement for the project lifetime and beyond
- Promote a culture of good environmental management both at the mining operation and in the wider community
- Continually assess ways to reduce direct and indirect greenhouse gas emissions and work with other organisations and the government and groups to address climate change and act as responsible stewards of our assets and operate to leading practice environmental standards

The Group's management, employees and contractors play a fundamental role in achieving these objectives by:

- Complying with the Environmental Policy principles
- Integrating environmental concerns in day to day work ethics; and
- Taking ownership of environmental management plans and programmes
